

1 GALLON

**AUTOMATIC
CARWASH**

Hot Spray WAX

CONTAINS
CARNAUBA WAX

CAUTION
KEEP OUT OF REACH OF CHILDREN
DO NOT TAKE INTERNALLY.
KEEP FROM FREEZING.

An excellent automatic car wash hot spray wax containing carnauba wax. Its very high concentration allows for immediate beading of water, reducing spots on glass, metal trim and finishes. It leaves a smooth, even shine without spots or streaks, giving every car a high quality, "professionally-cleaned" appearance.

DIRECTIONS

The optimum use concentration range in a hot wax application is 1000:1 to 1500:1. This can be achieved by either making the first mix at 10:1 (5 gal. to 50 gal. of water heated to between 120° to 200°F) and then running it through the wax archdema at between 100:1 and 150:1 for a final dilution of 1000:1 to 1500:1. For hot spray wax applications, 5 oz. of the 10:1 mix must be drawn by the wax archdema for each car.

If a Positrol is being used, insert a #61 drill orifice and that will pull your concentrate from the pail and dilute it 23:1. Product can then be run through the wax archdema from between 40:1 and 60:1 for a final dilution of between 1000:1 and 1500:1. For a hot spray wax application, 12 oz. of the 23:1 Positrol mix should be drawn for each car.

INGREDIENTS: Petroleum Hydrocarbon CAS #64741-44-2, Glycol Ether CAS #111-76-2
