floor neutralizer

CAUTION
Keep out of
reach of
children.

Prevents
floor finish
failure!

Product Reorder # L107
NET CONTENTS: 8 OUNCES

A concentrated, final-rinse neutralizer used after stripping. It prevents floor finish failure and powdering due to improper neutralization and inadequate rinsing. Quickly and easily removes heavy accumulations of soap scum, hard water films, and dangerous "alkali ice", keeping them soluble and suspended in the water so they won't re-deposit and dull the floor surface. Also works effectively for removing ice melt chloride stains from the floor surface.

Excellent for use in any high traffic area such as hospitals, office buildings, lobbies, supermarkets, hallways, schools, cafeterias, industrial plants, etc... Can be used on vinyl, vinyl asbestos, rubber and asphalt tile, terrazzo, concrete, and all surfaces not harmed by water.

DIRECTIONS:

- Dilute 1 part product with 7 parts water. Use as you would an all-purpose cleaner.
- Mop solution with a clean mop and pick-up with a wet vacuum or mopping bucket and wringer.
- Allow floors to dry thoroughly before applying any floor finish or sealer.

Ingredients: Sodium Polyphosphate CAS#68915-31-1,
Phosphate Ester CAS#52276-83-2, Chelating Agent CAS#64-02-8,
Water CAS#7732-18-5, Fragrance CAS# N/A
