1 GALLON

Sparkle

A concentrated, non-foaming, fast-acting drying agent designed for use with injectors in hot rinse water. It insures spotless drying of glasses, dishes, and silverware without wiping. Its concentrated non-foaming formulation contains lime control agents to eliminate spotting and streaking, assuring one-pass results and customer satisfaction. Use of this product insures that even pieces of tableware coming out of your dishwasher will be free of all water spots. This helps reduce towelling labor and minimizes handling, which helps limit breakage for an economic operation.

DIRECTIONS

Inject product into the final rinse through your machine's injector, at approximately one part to 4000-8000 parts water. It can be used in any type of rinse injector mechanism. It is recommended that the temperature of the final rinse water remain consistent.

May also be used in the final rinse stage of car washes at a concentration of one part to 6000 parts water. Temperature should be maintained at 180 degrees if possible.

INGREDIENTS

Alkoxyated Linear Alcohol

CAS# mixture-N/A
